

Connected business

VSAT Broadband Internet

VSAT Broadband Internet provides connectivity offerings tailored to suit a single user to a Small and Medium Business (SMB). Satellite Broadband delivers cost effective business speed broadband connectivity over VSAT anywhere in Africa.

Built for performance, Liquid Telecom is the only operator that has built its satellite platforms directly connecting to its core terrestrial network.

Benefits:

- **Experience enterprise-grade Internet speed** because Liquid Telecom purchases bandwidth upfront, it is ready the moment you need it
- **Reduced latency and increased reliability** as all African traffic is routed locally
- **Connect anywhere in Africa** through KU- and C-Band options according to your business needs, even in the most under-serviced and remote parts of Africa
- **Scale your network**, seamlessly linking multiple sites in remote areas on a single network
- **Reliability and availability** is increased during bad weather conditions enabled through the latest DVB-S2x and ACM technology
- **No restrictions** are applied to daily usage or peer-to-peer downloads, providing unshaped, unrestricted data

Features:

- **99.5%** service availability
- **Fully redundant** service and satellite platforms
- **Hubs** built using the latests technology
- **Low latency** of approximately 500 – 600 ms
- The Newtec and iDirect VSAT platforms support **MDM2200/2210, MDM2500, MDM3100, X1, X3 and X5 satellite modems** Internet or MPLS access is delivered via either **predefined uncapped packages with bespoke configuration options if required.**
- **Custom defined uncapped SLAs** are applied to Internet or MPLS access
- With a **dedicated logistics department** successfully keeping stock of VSAT kits across Africa, we can provide the quickest installation turnaround times possible
